

## DRaaS

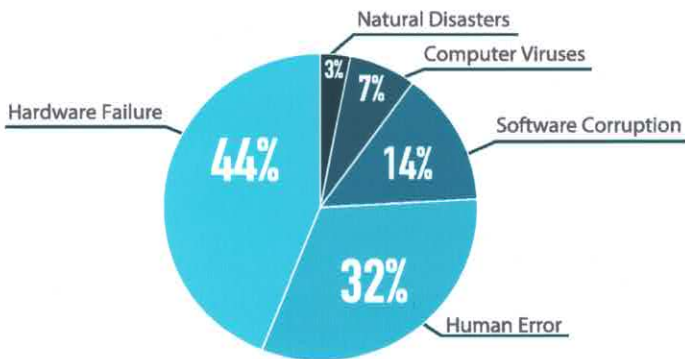

### DISASTER RECOVERY AS A SERVICE

Seamlessly replicate your cloud environment to another geographic zone at the block level in real time.

### WHAT IS DISASTER RECOVERY AS A SERVICE?

Disaster Recovery as a Service (DRaaS) has opened the door for companies looking for better protection strategies with limited budgets and resources to ensure data protection success. ManagedWay's DRaaS provides and maintains off-site DR environments with recovery solutions tailored for your unique business needs. Whatever the cause - natural disaster, human error, or cyber attack - the question is no longer if, but how you should be prepared. With DRaaS, the time to return applications to production is drastically reduced because data does not need to be restored over the Internet.
